PAGE 9:

SUMMARY OF THE CODE:

Code / Keyword	Simple Meaning
<code>let</code>	Creates a variable
<code>document</code>	Represents the HTML page
<code>getElementById()</code>	Finds an HTML element using its <code>id</code>
<code>getElementsByClassName()</code>	Finds HTML elements using their class name
<code>if</code>	Checks a condition
<code>else</code>	Runs when the <code>if</code> condition is false
<code>for</code>	Repeats code multiple times
<code>onclick</code>	Runs code when something is clicked
<code>onsubmit</code>	Runs code when a form is submitted
<code>function()</code>	Defines a block of code to perform a task

<code>.value</code>	Gets the value entered in an input
<code>.style.display</code>	Changes the display of an HTML element
<code>.innerHTML</code>	Changes HTML content
<code>.src</code>	Changes the source of an image
<code>.classList</code>	Works with CSS classes
<code>.toggle()</code>	Adds/removes a class
<code>.contains()</code>	Checks whether a class exists
<code>alert()</code>	Displays a popup message
<code>event.preventDefault())</code>	Stops the default form submission
<code>this</code>	Refers to the element that triggered the event
<code>nextElementSibling</code>	Gets the next HTML element
<code>++</code>	Increases a value by 1
<code>--</code>	Decreases a value by 1
<code>==</code>	Checks whether two values are equal
<code>,</code>	
<code>=</code>	Assigns a value
<code>[]</code>	Creates an array
<code>.length</code>	Gives the number of items
<code>true</code>	True condition
<code>false</code>	False condition
